Who will be there?
Professionals with a diverse range of experience come from around the world to join the Oxford Leadership Programme. Participants include:

- Transport and urban planners, consultants and economists
- Sustainability experts
- Transport engineers
- Business developers, strategic advisors and project managers
- Leaders in international development, government affairs
- Managers and ministry officials
- CEOs
- Risk analysts
- Local and national authority decision-makers
- Early/mid/senior career practitioners and researchers

Transport Studies Unit
Since 1973 the TSU has established an international research reputation in transport research.

Based within the world-leading School of Geography and the Environment at the University of Oxford, the TSU approaches global transport challenges from social science and holistic perspectives. This approach allows TSU researchers to ask questions that might not be asked in other sectors, building a comprehensive picture of the complex challenges facing transport today and in the future. Our position within Geography and the University fosters interdisciplinary collaboration with researchers in other parts of the University and based elsewhere.

The Global Challenges in Transport Oxford Leadership Programme is a series of short residential executive education courses designed to help decision-makers shape the future of sustainable transport.

Whether you attend one or multiple courses, this programme provides an opportunity to extend your professional expertise and revolutionise the way you think about the global challenges facing the transport sector.

The programme is delivered by the Transport Studies Unit and hosted at Kellogg College, University of Oxford.

Smart Technologies
17–20 March 2020
- Transition to electric mobility
- Shared mobility and mobility as a service
- The future of vehicle automation
- Governing transport in the smart city

Climate change
23–26 June 2020
- New transport solutions for climate change mitigation
- Adapting transport systems in the face of climate change
- Scenarios for low carbon and climate resilient mobility futures
- Governing transitions to low carbon and climate resilient transport systems

Infrastructures
8–11 September 2020
- Managing and designing the construction of transport megaprojects
- The economic and political impacts of transport infrastructures
- Building and financing sustainable infrastructures development
- The impacts of transport infrastructures on everyday life

Health and Wellbeing
8–11 December 2020
- Active travel, health and well-being
- The social and distributional impacts of transport
- The use of health impact assessment tools
- Pathways to increase road safety

Why Oxford?

“We are at a pivotal moment in time – a rapidly warming climate, new and expanding technologies, and the growing influence of the private sector are shaping transportation and mobility in our cities.

Completing this programme helped me understand the most pressing global trends. Some of the most important insights focused on accessibility and inclusion through urban mobility systems and the value of collaboration between government, non-profit and the private sector. This programme also supported my leadership development and introduced me to contacts around the world who are working as part of the transportation solution.”

Sarah Webb
Manager of Transportation Planning & Development,
City of Victoria, Canada

‘Each of our courses offers a fantastic opportunity to tap into the expertise of a world-class research centre. The programme incorporates lectures delivered by leading experts, interactive workshops, and hands-on demonstrations. Participants can expect to learn new approaches for thinking about the major challenges in transport and mobility today, build their professional networks, and develop new skills.’

Professor Tim Schwanen
Director of the Transport Studies Unit,
University of Oxford
